COMPANY PROFILE

Xinhua food machinery plant in huaiyang county, established in 1978, is a professional manufacturer and supplier engaged in the research, development, production, sale and service of baking tray. Our company covers an area of 30516m² square meters and has 160 employees. We are located in Zhoukou City, Henan Province with convenient transportation access. Our main products include baking tray, hamburger tray, toast mold, cake mold, baguette tray, sheet pan etc. All baking trays are constructed of commercial food grade materials, can be produced in various sizes and configurations to meet your baking needs, And are coated to your specifications. The surface coating is safe and meets the international food grade requirements. Our company has rich experiences in the baking industry and our products usually used for bakery or production line. Besides, Our company has imported equipment to strictly control the product quality. And we have strong research and development team to develop new products to meet different requirements. We export products to Europe and America, the Middle East, Southeast Asia, etc. Because of our professional services, quality products and competitive prices. We also welcome OEM and ODM orders. If you have any new ideas or concepts for the products, please contact us. We are glad to work together with you and finally bring you the satisfied products. Hope we can have better cooperation and make brilliant business!

CHARACTERISTICS OF NON-STICK COATING:

The non-stick coating our company uses is imported PTFE, collectively known as: non-stick coating, the characteristics of this material are as follows:

1:Non-stick performance: almost all substances are not bonded with PTFE coating, there are very good non-stick performance.

2:High temperature and low temperature resistance characteristics, a short period of time up to 300 °C, between 240 °C - 260 °C can be used continuously, high stability, it can also work in the freezing temperature. So it will not melt at high temperature and will not become brittle at low temperature.

3:High lubricity: it has a very low coefficient of friction, the lowest coefficient of friction among solid materials.

4:Moisture resistance: Its surface is not sticky to water, oil and solution, so it is easy to clean, which can save energy and improve efficiency.

5: Abrasion resistance: excellent wear resistance under high loads. Dual advantages of abrasion resistance and non-stick under certain loads.

Customized Product for your reference as follows:

Operation Manual for Teflon-coated

1. Clean the tray with the clean and soft cotton cloth before using.
2. Smear the oil over the tray, fill the slurry and bake.
3. No baking empty tray or empty tray with smeared oil.
4. Clean the tray and remove the crumbs with the clean and soft cotton cloth and air-dry the tray if leaving unused for a long time.
5. Do not scratch or scrape pans. Do not use metal utensils or other objects that could scratch the coating. Deep scratchers may cause surface corrosion on the pan. No alkali chemical cleaning agent to clean the tray, in case the coating will be damaged.

LOAF PAN SERIES

Single loaf pan, Strapped loaf pan, plain loaf pan, non-stick loaf pan. Various specifications and sizes can be customized according to your needs!
